## DETAILED ACTION

### *Reasons for Allowance*

**Claims 11-13 and 16-23** are allowed.

The following is an examiner's statement of reasons for allowance:

Prior art fails to teach a heater suitable for a reflow furnace comprising two discharge chambers disposed on opposite sides of the suction chamber, two partitions on opposite sides, each separating the suction chamber from one of the discharge chambers, sloping towards each other so that the flow area of the suction chamber decreases towards the inlet, opening which each connect the suction chamber with one of the discharge chambers, and wherein each discharge chamber has a perforated plate having discharge holes formed therein provided at the first end of the body.

Takahashi (JP 08-125327-A) discloses a heater 1 for reflow furnace having two partitions 2 with a suction port 3 between the partitions and discharge ports 4 disposed on opposite sides of the suction port, but the partitions do not slope towards each other. Kondo (US 4938410) discloses sloping partition plates 121 between adjoining heaters 11a to maintain temperature differentials. However, such partitions in Kondo do not slope such that the flow area of the suction chamber decreases towards the inlet as recited. Similarly, each of Mizoguchi (US 5567151), Mishina (US 5163599), Yokota (JP-11-204932) also teaches a reflow heater apparatus, but lacks the claimed arrangement of suction and discharge chambers. At the time of the invention, no motivation was found for one of ordinary skill in the art to modify the heater structure in prior art

Art Unit: 1735

apparatuses so as to arrive at the suction chamber, partitions, and discharge chambers as claimed.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
